

BURNDY® Pool Water Bonding Kit

BWB680 Series

"NEC 2008 680.26(C) states: "An intentional bond of a minimum conductive surface area of 9" shall be installed in contact with the pool water. This bond shall be permitted to consist of parts that are required to be bonded in 680.26(B)."

BURNDY® offers a complete line of grounding connectors for the pool & spa market. Lay-in lugs, ground mesh, ground connectors for rebar and ground lugs for motors to name a few. In 2008 NEC started requiring an additional ground connection and we have a perfect solution with the introduction of our new pool water bonding kit. The BWB680 series is made of non-corrosive stainless steel. The BURNDY water bonding kit maintains constant contact with pool water to ensure that the pool is effectively bonded at all times.

Some of the features of this product include:

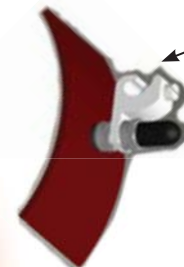

- Easy installation
- Mounting hardware included
- UL Listed
- Placed out of the way on the side wall of the skimmer, below the basket

The BURNDY® BWB680 series is one of the few (and the most user-friendly) on the market that complies with this code. **Other products that are available are placed in the plumbing, which is not always in contact with the water and therefore does not meet the code.** Since the BWB680 is placed in the skimmer, it is always in contact with the water.

INGROUND	Catalog Number:	BWB680IG	UPC:	78181049868
ABOVE GROUND	Catalog Number:	BWB860AG	UPC:	78181049867
