

RECYCLING PROGRAM

"Protecting the Environment and Your Business"

*Call **SCOTT ELECTRIC** for
the Most Comprehensive,
Most Convenient
RECYCLING PROGRAM
in the United States!*

Play it safe! Have your computers
recycled — not resold!

**Recycle Lamps,
Ballasts, Computers,
Electronics, Batteries & Transformers**

Protect Yourself from Future Liability

Mercury, Lead, and PCB's are harmful to human health and the environment. For that reason, fluorescent lamps containing mercury and ballasts containing PCB's are regulated by the U.S. Environmental Protection Agency.

Improper disposal of mercury waste can lead to regulatory action, fines, and future Superfund liability.

Scott Electric Recycling Program offers

- Environmentally secure handling of fluorescent lamps
- Mercury captured, recovered, and then distilled, while the uncontaminated components – glass, aluminum, and phosphorous powder are reclaimed.
The PCB Mega Rule makes the disposal of ballasts even more stringent.
- PCB components segregated for disposal at an EPA-approved facility, while the reclaimed steel, aluminum, and copper components are tested and recycled
- EPA Permits: Commercial storage of PCB's, Alternate Disposal Method Approval
- \$10 Million in General Liability Insurance (Aggregate); \$5 million in Pollution Liability Insurance

No Minimum Quantities

You don't need to accumulate large quantities of recyclable material and wait to ship to a recycling center. **Your Scott Electric delivery truck will pick up your recyclable material in any amount.**

No Freight or Handling Charges

Super Competitive Pricing – Call your Scott Electric salesman – inside or outside – for a FREE, no obligation quote.

Certificates of Recycling are issued for all recycled material.
