

The Ideal 35206 3.5 in. Electrician Level with 2 Vials and Magnetic Jaw is designed for both conduit and regular level applications. The body is CNC machined from 6061-T6 aluminum billet material for straightness, and then capped off with an anodized, corrosion-resistant finish for quality long-term performance. The bottom surface of the level has a v-groove for a stable mounting process to conduit. The 35-206 level also has oversized rare earth magnets, improving the level's holding power.

The 35206 features two vials, one for a 30° and another for a 90° degree bend. The vials are within oversized windows to provide a maximum vial at all angles, and a replacement vial is included. The vials feature a corrosion-resistant brass screw to help with an easy replacement process. This model offers a bull's eye vial to align X and Y axis points. The Integral Thumb Winder is a unique design that features a conduit wheel and a contoured screw to prevent doglegs and provides a non-slip grip and stability for maximum gripping strength. The thumb winder also helps allow for a convenient one-handed operation. The screw hugs the surface of the conduit for a firm and stable hold.
